SUMMARY OF CORRECTIONS

Bower-Bir, J. S. (2022). Desert and redistribution: Justice as a remedy for, and cause of, economic inequality. *Policy Studies Journal* 50(4): 757–795. https://doi.org/10.1111/psj.12439

The tables in the article contain two kinds of error:

- **Mistyped cells**, four in Table 1 and eighteen in the appendix tables. I mistyped them when entering the results into the manuscript. The most visible is in Table 1, Y_gov_fix_gap Model 3, where the Definition variable's coefficient is incorrectly printed as positive when it is negative, as the prose in Section 6.3 of the published article correctly states. None of the typos meaningfully bears on the paper's conclusions.
- **Two errors in the data cleaning.** The survey panel vendor delivered one respondent's answers under two different ids, and my cleaning script did not catch the duplicate, so the published sample of 992 observations holds 991 respondents. My original weighting script also placed the 54 respondents earning $25,000 to $29,999 per year in the under-$25,000 income group. I have re-estimated all models with both errors corrected. Coefficients move by a few hundredths of a unit, and in Table 1 the key independent variables—Definition, Agency, Justice, Rich deserve, Avg. deserve, and Poor deserve—all keep their signs and their significance, though Definition drops from the 1% level to the 5% level in one model and Agency rises from the 5% level to the 1% level in another. The other changes in Table 1 affect control variables.

The article's findings and interpretation stand. One sentence in Section 6.1 needs correcting. In that sentence I interpret the coefficient on Age², a control variable, as positive. The coefficient is negative, but so small in magnitude that the original table prints it as 0.000. Support for government action to reduce the income gap rises with age into the late thirties and then falls, rather than accelerating.

The corrected Table 1, estimated on the 991 distinct respondents with the corrected weights, follows. Every table in the article is reproduced in the freely available replication package, deposited in IU DataCORE, Indiana University's data repository (DOI forthcoming), with each corrected cell shown beside its published value.

TABLE 1 (CORRECTED, 991 OBSERVATIONS, CORRECTED WEIGHTS)

VARIABLE	Y_GOV_FIX_GAP			Y_PROG_TAX		
	MODEL 1	MODEL 2	MODEL 3	MODEL 1	MODEL 2	MODEL 3

Coefficients with robust standard errors in parentheses; * p < 0.10, ** p < 0.05, *** p < 0.01. Coefficients that round to zero keep their sign. The constant is the grand-mean intercept, as Stata reports it; its standard error is an approximation.
