FINAL TABLES: DUPLICATE REMOVED, WEIGHTS CORRECTED

Bower-Bir, J. S. (2022). Desert and redistribution: Justice as a remedy for, and cause of, economic inequality. *Policy Studies Journal* 50(4): 757–795. https://doi.org/10.1111/psj.12439

The fully corrected tables, re-estimated on the deduplicated dataset of 991 distinct respondents, with the survey weight raked again on those rows and with every respondent in the correct income group (my original 2014 weighting script had put the 54 respondents earning $25,000 to $29,999 in the under-$25,000 income group). Nothing in the corrected tables changes the article's findings or interpretation. One sentence of the article calls the Age² coefficient positive (the published tables print it as 0.000), but it is slightly negative, which these tables show as −0.000. Coefficients that round to zero keep their sign. The constant is the grand-mean intercept, as Stata reports it; its standard error is an approximation. The final section lists every cell that changes when moving from the published dataset and weights to the final ones, with the two values side by side.

Table 1 · Table A1 · Table C1 · Table C2 · Table D1 ·
The marginal effects in Figures D1 and D2 · Changed cells

THE MARGINAL EFFECTS IN FIGURES D1 AND D2

Each line's value at the two ends of its horizontal axis, with its standard error. In D1 that is the marginal effect of Definition at Z = 0 and Z = 1 (in D1(c), with the other two deserve scores at their means). In D2 it is the marginal effect of Z at Definition = 0 and Definition = 1.
